

SILA Client Reporting Recommendations

What ClickCease Typically Includes in Client Reports

1. Executive Summary

Displayed at the top of the report:

- Total Clicks
- Invalid/Fraudulent Clicks Blocked
- Fraud Rate (%)
- Estimated Money Saved
- Number of IPs Blocked
- Reporting Period

2. Traffic Quality Over Time

Chart: Line Graph

Displays:

- Total Clicks
- Valid Clicks

- Fraudulent Clicks

Shown by day or week to visualize trends.

3. Fraud Breakdown

Chart: Pie / Donut Chart

Breakdown of invalid traffic:

- Bots
- VPN / Proxy Traffic
- Data Centers
- Click Farms
- Competitor Clicks (if detected)
- Repeat Clicks
- Invalid Geographic Traffic

4. Blocked Visitors

Table

Columns:

- IP Address
- Country

- City
- ISP
- Device
- Reason Blocked
- Number of Clicks
- First Seen
- Last Seen

5. Geographic Map

Interactive map showing where fraudulent traffic originated.

Can display:

- Countries
- Cities
- Traffic Density

6. Campaign Breakdown

Per Google Ads or Meta campaign:

- Fraud Rate
- Wasted Spend
- Protection Rate

Helps identify which campaigns generate the most invalid traffic.

7. Estimated Savings

Shows:

- Money Saved Today
- Money Saved This Month
- Total Money Saved Since Installation

8. Device Breakdown

Chart: Bar Chart

Traffic split by:

- Desktop
- Mobile
- Tablet

9. Network / ISP Report

Shows which:

- ISPs

- Hosting Providers
- Data Centers

Generated the highest amount of invalid traffic.

10. Visitor Timeline

Shows when fraudulent clicks occurred throughout the day.

Useful for spotting click attacks and unusual traffic spikes.

Recommended SILA Reporting Dashboard

Rather than positioning SILA as only a fraud detection platform, position it as a **marketing performance optimization platform**.

The report should answer one question:

“How did SILA improve my marketing performance and protect my advertising investment?”

Page 1 – Executive Dashboard

Display large KPI cards for:

- Ad Spend Protected
- Fraud Rate (%)
- Budget Recovered
- Genuine Audience %
- Estimated Additional Conversions
- ROAS Improvement
- Cost per Valid Visitor
- Cost per Genuine Lead

Use green/red indicators for quick readability.

Page 2 – Budget Recovery

Chart: Stacked Bar Chart

Example:

Ad Budget

 Valid Traffic

█ Fraud

█ Bots

█ Competitor Clicks

Also include a key insight such as:

“23% of your advertising budget was being spent on non-genuine traffic.”

This should be the primary takeaway for the client.

Page 3 – Traffic Quality Trend

Chart: Line Graph

Three trend lines:

- Genuine Traffic
- Invalid Traffic
- Blocked Traffic

This visualizes improvements over time.

Page 4 – Marketing Funnel

Instead of reporting only clicks, show traffic quality throughout the marketing funnel:

Impressions

Clicks

Valid Visitors

Engaged Visitors

Qualified Leads

This clearly demonstrates how SILA improves the quality of traffic entering the sales funnel.

Page 5 – Fraud Origin Map

Interactive map displaying:

- Countries

- Cities
- Autonomous Systems (ASN)
- Data Centers
- VPN Networks
- Bot Networks

Page 6 – Campaign Health

Rank campaigns using a table:

Campaign
Spend
Fraud %
Budget Saved
Recommendation
Brand Search
\$4,500
9%
\$405
Healthy
Display Campaign
\$6,200
34%
\$2,108
Needs Attention
Meta Prospecting
\$3,800
42%
\$1,596
High Fraud
