

# Responsible AI Usage Policy

Last updated: March 18, 2026

## 1. Purpose and Commitment

Aivota leverages Generative Artificial Intelligence to empower non-verbal individuals with real-time, context-aware communication. We are committed to the Responsible, Ethical, and Transparent deployment of AI. This policy governs how our AI agents interact with users, caregivers, educators, and data across our entire ecosystem, including the **CliniAAcian** platform.

## 2. AI in the CliniAAcian Platform

Our **CliniAAcian** platform utilizes specialized Generative AI models to assist professionals and educators in the following areas:

- **IEP Development:** Generating drafts for Individualized Education Programs (IEPs) based on student observation data.
- **Target Generation:** Suggesting specific student communication goals and measurable targets.
- **AAC Board Creation:** Dynamically generating custom communication boards tailored to specific student interests or environmental contexts.
- **Future Tools:** Developing predictive analytics and reporting tools to track student progress over time.

## 3. Nature of AI-Generated Content & Professional Oversight

**3.1. Drafting Tool Only:** All AI outputs in CliniAAcian—including IEP goals and student targets—are provided as **drafts for professional review**. **3.2. Human-in-the-Loop (Mandatory):** Educators and clinicians must review, edit, and formally approve any AI-generated content before it is implemented in a student's formal record. **3.3. Precedence:** In any case of contradiction between an AI-generated suggestion and a clinician's professional judgment or a school district's official policy, the **human professional's judgment shall prevail**.

## 4. Prohibited Uses of AI

Users are strictly prohibited from:

- **Automated Finality:** Using AI to finalize legal or educational documents (like a signed IEP) without a documented human review.

- **Unauthorized Diagnosis:** Relying on the AI to provide a formal medical or psychological diagnosis.
- **Data Exploitation:** Using student data or Aivota's **Proprietary Symbol Set** to train third-party or competitive machine learning models.
- **Bias and Discrimination:** Using the platform to generate content that discriminates against students based on disability type, race, gender, or background.

## 5. Privacy, De-identification, and Security

5.1. **Data Minimization:** When generating IEPs or targets, CliniAAcian utilizes de-identification protocols to ensure that sensitive health information is processed securely. 5.2. **Compliance:** AI processing within CliniAAcian is designed to comply with the **Israeli Privacy Protection Law (2026)**, **FERPA** (for school records), and **HIPAA** (for clinical data). 5.3. **Opt-out of Training:** Users may request that their specific student interaction data be excluded from the "Global" model training sets via the privacy dashboard.
